SKILLS

- HTML, CSS and Javascript
- Machine Learning
- Database Management
- Social Media Marketing
- Python Programming
- Data Structures and Algorithms
- C++ Programming
- SQL and NoSQL

LANGUAGES

- English (Fluent)
- French (Basic)
- Marathi (Fluent)
- Hindi (Fluent)

HOBBIES

Learning Languages

Reading

PROFILE

Results-driven Software Developer with experience in Python, C++, SQL, Power BI, and Tableau. Skilled in building dashboards, data models, and using DAX/Power Query for insights. Proficient in data cleaning, analysis, and basic machine learning. Familiar with Azure Data Factory and Azure SQL for cloud-based integration. Strong analytical mindset focused on data-driven decisions.

PROJECTS

Deepfake Detection using Machine Learning

Developed a deepfake detection website using Python and machine learning. Trained a CNN model on video datasets to identify manipulated content. Implemented face detection and frame analysis. Built a web interface for video upload and real-time results. Deployed the solution using Flask and cloud services for accessibility.

Smart Attendance System with Face Recognition

Created a Python-based face recognition system for automated student attendance. Used OpenCV and face encodings to detect and verify individuals from webcam feed. Stored attendance logs in a SQLite database. Designed a Tkinter GUI for ease of use. Tested in real classroom environments with high recognition accuracy.

Emotion Detection System

Built a Python-based application to detect human emotions from facial expressions using OpenCV and a CNN model trained on FER-2013 dataset. Analyzed real-time webcam feed to classify emotions like happy, sad, angry, etc. Created a simple Tkinter GUI for user interaction. Tested for live emotion tracking accuracy.

EDUCATION

Bachelor of Science in Information Technology 2022 - 2025

B.K. Birla College of Arts, Science and Commerce

CGPA : 8.33/10
